

Emily Follansbee  
PhD student in Systems Engineering

**Current Project Overview**

Yet to be announced

**Current Role & Research Focus**

I am a PhD student in Systems Engineering at Colorado State University at the Methane Emissions Technology Evaluation Center (METEC). My research focus is on measurement and modeling of anthropogenic methane emissions for leak detection and quantification. I have previous experience in civil engineering, environmental science, sustainability, atmospheric science, the energy transition, and water resources. My work supports goals of engineered solutions to energy, the environment, and climate change.
